## Low Noise, High Precision, High Voltage, Rail-to-Rail I/O Operational Amplifiers

---

### GENERAL DESCRIPTION

The SGM8273-1 (single), SGM8273-2 (dual) and SGM8273-4 (quad) are low noise, high precision, high voltage operational amplifiers that are designed to offer a wide input common mode voltage range and output voltage swing. These devices can operate from  $\pm 1.65V$  to  $\pm 18V$  dual power supplies or from 3.3V to 36V single supply.

The devices feature low noise, high slew rate, low input bias and offset current, low offset voltage and low offset voltage temperature coefficient.

The SGM8273-1/2/4 are specified over the extended  $-40^{\circ}C$  to  $+125^{\circ}C$  temperature range. The single SGM8273-1 is available in Green SOT-23-5, SOIC-8 and MSOP-8 packages. The dual SGM8273-2 is available in a Green SOIC-8 package. The quad SGM8273-4 is available in a Green SOIC-14 package.

**RECOMMENDED OPERATING CONDITIONS**

Operating Temperature Range ..... -40°C to +125°C

NOTE:

1. Proper power supply sequencing is recommended for the CMOS device. Always sequence Vs on first, followed by the inputs and outputs.

**OVERSTRESS CAUTION**

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

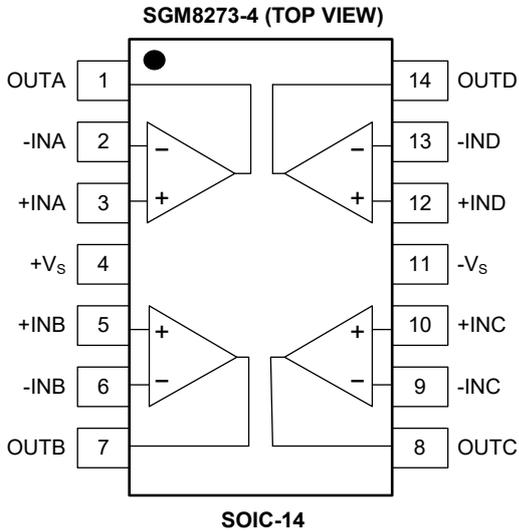

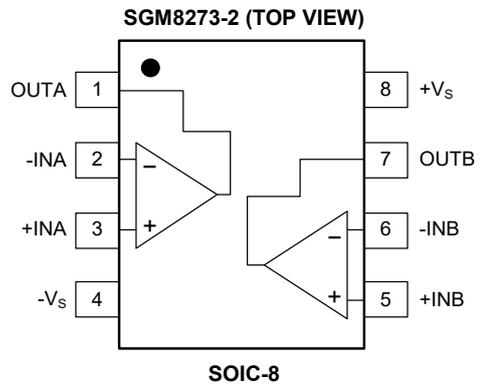

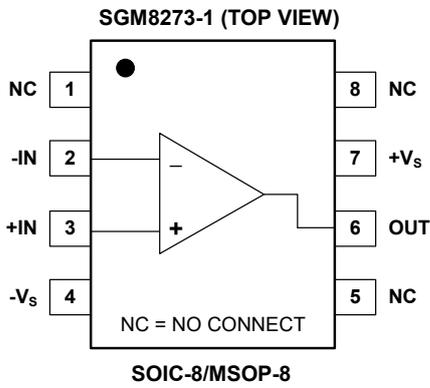

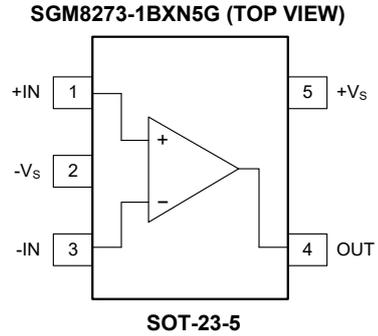

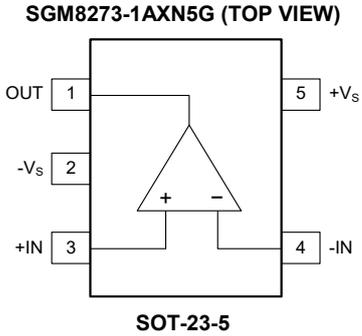

**ESD SENSITIVITY CAUTION**

This integrated circuit can be damaged by ESD if you don't pay attention to ESD protection. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.
